

INSTALLATION INSTRUCTIONS

102024 Battery Positive Cable – 1986-1987 turbo Buick

Factory replacement battery positive cable has alternator feed, starter feed and ECM MEM feed. Furnished with protective bolt cover. OEM wire gage and sizes are used throughout. All critical lug connections are crimped and soldered to ensure reliability.

NOTE: Cable feed to starter stud has been increased by 3 in. to accommodate larger aftermarket downpipe clearance.

Be sure cable does not contact hot exhaust pipes as burn-thru may result in electrical shorts. Make sure all connections are tightened securely.
