

# NEW PRODUCT RELEASE

## GNX Dash Harness for OEM-style GNX Cluster

### Available in both Analog and Digital Versions

The GNX dash cluster has been successfully reproduced by World of Motorworks and in a joint effort with Caspers, we have produced a "Plug-And-Play" cluster harness. This harness incorporates specially made "Telltale" and "Hi-Beam/L-Turn/R-Turn" illumination systems using high brightness LED's instead of the fuse-style lamps used in the original GNX production dash cluster. Also, the harness incorporates an injection-molded interface connector to assure proper connections to the factory dash cluster connector. The harness is now available, for either the analog Regal dash or the Digital Regal dash, from Caspers and World of Motorworks. Dash connector affixes securely to the cluster harness using a single cable tie, similar to the OEM style connector.
